Although Photoshop supports 32-bit color space, it can also use a native 4-bit color space, the palettes of which are limited to a maximum of 16 colors. Photoshop CS3 and CS4 have a palette view, or window, that shows you a preview of the colors available to you. Additionally, Photoshop CS4 has a `_color_picker_`, which provides more precise control over color selection. There are three main Photoshop products: the Creative Suite, the Elements line, and Photoshop. Photoshop CS3 is the most fully featured with the most components, but Photoshop CS4 is better integrated with other Adobe programs. Elements 9 is intended to be a Photoshop alternative. Figure 20-3 shows the Elements palettes. Because Photoshop is so advanced, it requires a large system with lots of space. That's why it's a best choice for bigger jobs. If you own both Photoshop and Elements (or one of the other programs in the suite), you're better off using Photoshop because it has more tools and features, but Elements is better for noncreative uses, such as converting files into different file formats, combining image files, and so on. Photoshop comes in three versions, which differ in what they can do. The `_Standard_` and `_Professional_` versions include lots of powerful features but are not designed for beginners. The `_Adobe Photoshop Creative Suite_`, which started with CS3, is fully loaded with all the features in Photoshop. The entry-level `_Adobe Photoshop Elements_` does not include all the features in Photoshop CS3 and doesn't require a large amount of disk space. Also, it lacks the Creative Suite's content areas for websites and graphics. **Figure 20-3:** Elements 9 has fewer tools and features than Photoshop. Q: How to determine if an array has a max value in C#? I have an array of some unknown size and I am trying to figure out how I can get the maximum value inside of that array. for example: var myArray = new int[] {10, 20, 30, 50, 60, 70, 80, 90, 100}; How can I determine if my array contains a max value inside of it? A: You could use LINQ extension method MaxBy: int max = myArray.MaxBy(x => x); // max is 10 From the name of your method, it looks like you want to find the maximum value in a list of values: // Finds the max value in a list of integers int max = myArray.Max(); The present invention relates generally to motor vehicle heaters, and more particularly, to a heat-receiving cylinder for a motor vehicle heater which includes a heat-receiving element for holding heat generated by a heat source, a layer for receiving the heat from the heat-receiving element, and a heat-conducting member for conducting the heat from the heat-receiving element to the layer. In a known arrangement disclosed in German Patent Disclosure DE 199 46 579 A1, a heat-receiving cylinder for a motor vehicle heater includes a heat-receiving element and a layer for receiving heat from the heat-receiving element. A heat-conducting member is arranged in the flow of heat at a distance from the heat-receiving element, and extends as far as the layer to conduct heat from the heat-receiving element to the layer. A bellow-type elastic connection is used to hold the heat-receiving element and the heat-conducting member in a position remote from the heat-receiving element and in a position remote from the heat-conducting member. The bellow-type elastic connection consists of a bellows-type cylindrical heat-conducting element which is clamped by two U-shaped clamping elements and is separated by a distance from the heat-conducting member. It is an object of the present invention to provide a heat-receiving cylinder for a motor vehicle heater which includes a heat-receiving element and a layer for receiving heat from the heat-receiving element, and which
